

01. PROJECT QUOTE

For most clients, the initial phase of your product enquiry involves acquiring a project quote. We offer a prompt, indicative cost for the supply & installation of your product, encompassing all costs from materials to labour. This preliminary quote provides a transparent overview of the financial commitment necessary and establishes clear expectations from the outset, assisting you in making informed choices to enhance your work environment.

02. TECHNICAL SITE SURVEY

Once you are happy with your quotation, and if required, we will visit your site to perform a comprehensive site survey. During this visit, we evaluate your current space, take detailed measurements, pinpoint any possible obstacles, and collect precise specifications. This phase is crucial to ensure we grasp your vision and can deliver a tailored professional service that meets your requirements.

03. TECHNICAL DRAWING

We then proceed to develop technical drawings. These drawings show the layout and dimensions of your product design, prepared for you to review and approve. This phase ensures that your products are precise before the commencement of any construction. By visualising the end product, you can implement any required modifications and verify that the design aligns with your specifications.

04. INSTALLATION

You can be confident that we manage the entire procedure from beginning to end. Our team possesses extensive industry experience, enabling us to execute your project efficiently while accommodating your operations for your convenience. With our expertise, you can rest assured that your finished product is secure and that all features are installed to the utmost standards.

05. AFTERCARE & SUPPORT

The support does not conclude here. We are consistently available to address any inquiries you might have or to assist with any upcoming projects. If you need any adjustments or further installations, our specialists are prepared to ensure your workplace stays adaptable and current.
